## FEATURES

- Industrial Standard DIP-8 Package
- Unregulated Output Voltage
- I/O Isolation 1500VDC
- Operating Ambient Temp. Range -40℃ to +85℃
- Short Circuit Protection

## PRODUCT OVERVIEW

The MINMAX MFSU01 series is a range of isolated 1W DC-DC converter modules in DIP-8. There are 9 models available for 5,12 or 24VDC input. Advanced circuit topology provides continuous short circuit protection and a high efficiency up to 83% which allows operating ambient temperatures range of -40℃ to +85℃ without power derating. These converters offer a better solution for all applications where fault condition protection are required.

### Model Selection Guide

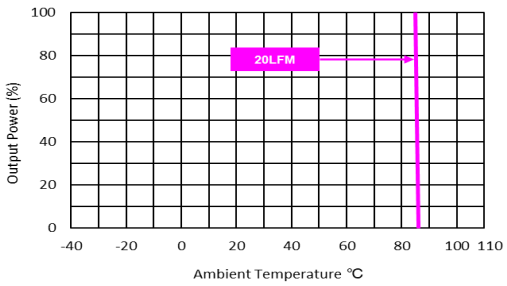
## Power Derating Curve



## Notes

1 Specifications typical at Ta=+25℃, resistive load, nominal input voltage and rated output current unless otherwise noted.

2 These power converters require a minimum output loading to maintain specified regulation, operation under no-load conditions will not damage these modules; however they may not meet all specifications listed.

3 We recommend to protect the converter by a fast blow fuse in the input supply line.

4 Other input and output voltage may be available, please contact MINMAX.

5 To meet EN55032 Class B an external filter, please contact MINMAX.

6 To meet EN61000-4-4 & EN61000-4-5 an external capacitor across the input pins is required, please contact MINMAX.

7 Specifications are subject to change without notice.

8 The repeated high voltage isolation testing of the converter can degrade isolation capability, to a lesser or greater degree depending on materials, construction, environment and and reflow solder process. Any material is susceptible to eventual chemical degradation when subject to very high applied voltages thus implying that the number of tests should be strictly limited. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage. Furthermore, the high voltage isolation capability after reflow solder process should be evaluated as it is applied on system.
